Shela, Ahmedabad 380058

PROFILE

I am a skilled **React JS Developer** with **3.5 years of experience**, including **1 year in React JS** and **3.5 years in PHP**. I specialize in building dynamic, responsive web applications with a focus on scalability and user experience.

SKILLS

- JavaScript & ES6+
- RESTful APIs & JSON
- MySQL & Database Management
- Version Control (Git, GitHub, GitLab)
- Front-End Frameworks (Bootstrap, Material UI)
- Back-End Development (Core PHP, Node.js)
- Responsive Web Design & Cross-Browser Compatibility

EXPERIENCE

BITS INFOTECH, AHMEDABAD

FEB-2021 - Present

Currently, I work at BITS INFOTECH as a Full-Stack Developer with a total of 3.5 years of experience, including 1 year in React JS and 3.5 years in PHP. My responsibilities include:

- Integrating and managing data from back-end services and databases.
- Developing back-end applications using PHP and React JS.
- Handling database administration and server hosting.
- Designing and maintaining websites tailored to client specifications.
- Leading and mentoring junior web developers.
- Creating custom websites to meet specific client needs.

PROJECT

ECOMMERCE STORE —(REACT JS + PHP API)

bitsinfotech.in/mystore

Project description:-

- Product Ordering: Users can browse and order products.
- Ratings and Reviews: Users can rate and review products based on their experiences.
- Wishlist: Users can add products to a wishlist for future reference.
- Order Management:
- Admin and delivery personnel can update order status and delivery options.
- Users can track the status of their orders.
- Invoice Details: Users can access invoice details at any time.
- Product Search: Users can search for products by their names.
- Payment Options: The system supports both online payments and Cash on Delivery (COD).
- Admin Blog: Admin can add product-related blogs for users to enhance engagement and provide information.

PROJECT

MATRIMONIAL —(REACT JS + PHP API)

Project description:-

- User Authentication: Users need to log in to view other user profiles.
- Advanced Search Filters: Users can search for profiles using various filters such as age, area, and city.
- Profile Wishlist: Users can add other user profiles to their wishlist for easy access.
- Phone Number Request: Users can send a request to view another user's phone number. If the request is approved, all details of the user become visible.
- Membership Purchase: Users must purchase a membership to send phone number requests.
- Notifications and Alerts: When a user sends a request, the selected user receives a notification and a text message alert.

AGL SHOWROOM (REACT JS + PHP API)

Project description:-

Admin Functions:

- Employee Management: Admin manages all employees according to their respective showrooms.
- Invoice Approval: Admin approves invoices uploaded by dealers.
- Work Reports: Admin can view employee work reports based on their customer visits.

Employee Functions:

- Customer Management: Employees manage customer visits and handle products.
- Quotation Generation: The system generates quotations and PDFs, which are sent to customers via WhatsApp.
- Follow-Up Reminders: The system sends follow-up reminders to employees for customer engagement.

Showroom Manager Functions:

- QR Code Generation: Showroom managers generate QR codes for products and dealers.
- Invoice and Product Tracking: Showroom managers can view dealer invoices and track products.

Dealer Functions:

- Invoice Upload: Dealers upload invoices to the system for admin approval.

Plumber Functions:

- Loyalty Points: Plumbers scan product QR codes to earn loyalty points.

LAKSHYA POWERTECH PRIVATE LIMITED (REACT JS + PHP API)

Project description:-

- Attendance Management: Upload daily attendance from Excel sheets categorized by plant and project.
- Shift Calculation: Automatically calculate employee shifts (Day, Night, General, 8Hrs A/B/C) based on check-in and check-out times if not uploaded.
- Attendance Calculation: System calculates employee check-in/out times, total working hours, remaining time, day status (Full day, Half day, absent), and other remarks.
- New Employee Handling: Automatically add new employee details and tag them for identification.
- Attendance Reporting: Admin can view day-wise or month-wise attendance reports for all employees or single employees.
- Salary and Leave Management: Automatically calculate employee salary and leave entitlement based on attendance reports.
- Transaction Management: Manage office, project, and plant transactions (e.g., food, fuel) within the system.
- Live Location Tracking: Fetch and display live employee locations and movements in the admin panel for monitoring.
